

Context

- Tobacco is a key crop in Malawi, Mozambique, Tanzania and Zimbabwe
- Value of tobacco exports as percentage of total exports:

2016

• Malawi 53,0%

• Mozambique 4,5%

• Tanzania 8,4%

• **Zimbabwe** 32,7%

- Tobacco profitability for smallholder farmers in remote areas is seldom matched by other crops.
- Governments are keen to maintain a stable rural population in remote areas.
- The development of a successful value chain takes time.
- Tobacco is the cash crop platform for diversification.

Universal Leaf Africa – Business Model

- Established farmer base
- Certified seed and inputs
- High percentage of debt recovery
- Access to market
- Stable robust market and relationship
- Cost of Production Model
- Extension services
- Digital data capture
- Global standard Labour, Sustainability and Compliance Programs
- Agro-processing facilities for value addition

Tobacco & Food Certified Inputs

STP, ALP & Sustainability Programs

Focus on Crop,
People &
Environment

Small Scale Growers – Farmer to Entrepreneur

- Majority in Africa are small scale > 1ha.
- Primary objective development of food security alongside tobacco production.
- Then next steps to Agri-diversification:
 - **Geographic constraints** growers geographically isolated
 - Access to resources limited e.g. banks, ancillary service providers
 - Inputs and CPA's on time, accurate and cost competitive
 - **Storage** poor storage facilities, losses
 - Market and logistics lack of robust and predictable markets, seasonal price variation, traders and middlemen
 - **Progression** irrigation, mechanisation
- Government inclusion food crops and land politically sensitive
- Integrated approach, parenting with our customers, NGOs, governments and local authorities
- Move towards critical mass, efficiencies and productivity

Universal Food Crop Inputs CY18:

Total LLTC CY18 Food Crop financing - \$2,090,000

Total MLTC CY18 Food Crop financing

- \$5,500,000

Strategic transport and inputs distribution footprint

- Malawi 13,000 contracted growers
- Mozambique 127,000 contracted growers

Partnerships:

- AGDIV (USAID)
- MSIKA (Land o' Lakes)
- ACE (Chithumba)
- Kamponji
- Variety Trials
- Inoculants
- PICS Bags
- Irrigation drip

Strategic depots and buying centers

CoP + Margin to Grower

EDP Hatchery and feed operation in Mozambique

Sales Agreements

- Grain Securities (Chuma Beans)
- ACE Commodity (Soyabeans)
- Groundnuts

Other Market Opportunities

- Kamponji (Maize & Soyabeans)
- Sunseed (Soya & Sunflower)

Trials

- Ensure that any complementary crops are extensively trialled and known to be suitable disease resistance, out of rainfall cycle, yields, etc.
- Current trials for variety, yield, disease resistance and palatability:
 - Orange Flesh Sweet Potatoes
 - Groundnuts
 - Edible Beans
 - Soybeans
 - Maize
 - Dryland Rice
- Small-scale irrigation programs to develop best practices and ensure responsible effective water use
- Honey project beekeeping training

Thank you
